Python Project - Week 2

Lists, Dictionaries, and Loops - Inventory Menu

Today's goal

Use lists, dictionaries, FOR loops, and WHILE loops to store game information and build a repeated menu.

1. Guided Coding

Study the example code below with your team. Type it into your editor and run it. Do not copy and paste.

```
inventory = ["potion"]
player = {"name": "Alex", "hp": 100, "gold": 30}

print("[Player]")
for key, value in player.items():
    print(key, ":", value)

print("[Inventory]")
for item in inventory:
    print("-", item)
```

2. Team Coding Tasks

1. Create a menu that repeats using while True.

2. Add menu options for Show Status, Show Inventory, Find an Item, and Exit.

3. When Find an Item is selected, receive an item name and add it to inventory using append().

4. Use break so that the loop ends only when Exit is selected.

3. Expected Output / Checkpoint

```
[Menu]
1. Show status
2. Show inventory
3. Find an item
4. Exit
Select: 3
Item found: key
key was added.

[Inventory]
- potion
- key
```

4. Submission Check

• The program runs without errors.

• The program runs from beginning to end.

• Every team member can explain the code added this week.

• Save the completed source code as week2_project.py.
